Introduction

ZeusNetwork is a decentralized ERC-20 token “ZEUS” designed to provide users with the ability to donate to charities, disaster relief programs, and fundraising campaigns without the interference of any third party or governing body.

Crowdfunding Examples:

- Natural or man-made disaster relief
- Illness or injury relief
- Poverty relief
- Funeral expenses
- Education donations
- Athletic team fundraising

Mission

Zeus Network is built on the Ethereum Network, which enables fast and secure transactions where funds can be sent to anyone globally within seconds. This revolutionary technology provides a platform for any user to participate in charitable giving, no matter what the prior limitations may have been. As long as one has an internet or mobile connection, a transaction can take place.

Vision

As we know it, donating to charity is big business with many organizations handling several million in revenue. Unfortunately, many organizations have become morally and ethically unsound in how they handle those funds. By applying our blockchain technology, Zeus Network will create a new pathway for both for-profit and non-profit crowdfunding distribution and work to eliminate corruption.

Roadmap

How to use the ZeusNetwork Platform

1. Start your campaign

Visit www.zeusfundme.com and click **Start Crowdfund** in the top right-hand corner.

Users are able to create and build their own fund-raising campaign within the Zeus Network by submitting approval documentation to determine legitimacy.

Each campaign will be able to share their stories, videos and pictures within their profile to address to their need or circumstance.

All campaigns will have their own progress bar to gauge how far off they are from their required financial goal.

Senders and recipients can communicate by privately emailing the user or leaving their own message within the comment box.

Users can create a campaign update feature to notify donating participants on current situations and results of events.

2. Share with people you know

Approved users are able to share their campaigns through any social media platform via a link to Facebook, Instagram, or Twitter.

Users can send emails to individual participants through their campaign for a more personalized “thank you”.

These features will enable campaigns to have a broader reach awareness throughout the cryptocurrency community and also incentivize non-crypto adopters to participate, leading to mass adoption.

3. Manage crypto donations

Zeus Network incentivizes users to manage their fund-raising campaign by providing more control over their accounts.

All campaigns will be provided with funds goal progress bar, showing transparency to their donors.

Once users accomplish their campaign fundraising goal or have decided to withdraw funds, Zeus Network will deposit to nominated account/address of their choice within 24-48 hours.

ZeusNetwork Technical Features

Platform

The ZEUS token powers all of the crowdfunding campaigns offered on the ZeusNetwork Platform. All of the campaign details are presented in the platform and their data is fetched directly from the Ethereum blockchain since each campaign will have a unique address associated with it for donations.

To start a campaign, the user must visit www.zeusfundme.com and click the **Start Crowdfund** button in the top right-hand corner. The user will be asked to fill out a form with all the requested data about their campaign which will be sent to the ZeusNetwork team for review.

The ZeusNetwork team will perform a vetting process to guarantee only legit campaigns will run on the platform and to provide safety to our donors that the causes are fully backed by a verifiable story. Once the vetting process is complete and the cause has been determined to be legit, the ZeusNetwork team will create a smart contract to receive Ether funds from donors and forward to the individual or charity in need.

Each campaign smart contract will show the following:

- ETH raised in Wei units
- Wallet where the donated funds are sent
- Wallet where the 1% TX fee is sent.

Each campaign will have an associated QR code or address displayed in the platform for the donator to use when making a donation. Additionally, a link to an explorer for each campaign is presented to the donor to confirm all the transfers completed in the campaign.

Important: Currently, all donations must be made with Ethereum but additional cryptocurrencies will be added in the future such as BTC, LTC, BNB and more. Make sure to only use the presented address in the crowdfund platform when donating.

ZEUS Token Utility and Fees

The ZEUS token is intended to be used as a utility token.

CAMPAIGN ORGANIZER

After the ZeusNetwork team has vetted the organizers story, the organizer will need to pay 10,000 ZEUS to deploy the smart contract and begin crowdfunding.

DONATOR

In order for users to be able to donate to a campaign they must hold 10,000 ZEUS in the ERC-20 wallet that they'll be sending Ether from. The smart contract for the campaign will automatically check the donors address to ensure it has a balance of 10,000 ZEUS before accepting the donation.

See the below example:

Maria wants to donate 1 ETH to a cause she saw in the ZeusNetwork platform. She noticed the campaign requires the donor to hold 10,000 ZEUS in their ERC-20 wallet in order to donate. Maria proceeds to buy 10,000 ZEUS and can now donate 1 ETH to that campaign.

If Maria wants, she can sell the Zeus or she can hold it to be able to donate to other campaigns on the ZeusNetwork platform. With this, we guarantee that the Zeus token is used and helps power the platform.

FEES

Zeus has a HolderCrowdfundFee template that is deployed to Ethereum Blockchain for each campaign. Each donation made with Ether in this smart contract will have a 1% fee deducted from it, where the fee is forward to the ZeusNetwork team wallet to help cover the costs associated with KYC manual checks. The remaining value is forwarded to the donation wallet for the campaign.

When the ZEUS token volume grows in all markets, the ZeusNetwork platform will provide the option for users to donate ZEUS directly to the individual or charity instead of Ether without being charged any fee.

Smart Contracts

ZeusNetwork has developed the following set of crowdfunds contracts that are used together to provide the full functionality of the Zeus crowdfund template.

Crowdfund

Crowdfund is a base contract for managing donations, allowing donators to donate Ether to a cause. This contract implements such functionality in its most fundamental form and can be extended to provide additional functionality and/or custom behavior. The external interface represents the basic interface for purchasing tokens, and conform the base architecture for crowdfunds.

CrowdfundFee

Add Fee's functionality to each donation. The ZeusNetwork team has costs associated with doing a rigorous manual check of each campaign which is covered by the 1% fixed fee charged at each donation. This fee is presented transparently in the blockchain and you can check all the transfers using the etherscan explorer.

Freezable Crowdfund

Add Freezable functionality. This feature is used when despite the ZeusNetwork team completing a rigorous verification of the organizer and their story, the team finds out that the organizer or story is not legit. In these instances, the ZeusNetwork team will freeze the donations to the contract, limiting the amount of damage caused.

Another usage for this feature is when the donation goal was already accomplished or the individual or charity designated to receive the donation doesn't need it anymore.

HolderCrowdfund

Is an extension of Crowdfund that only allows donors with a pre-determined token holding to be able to donate to a campaign. This contract enables the ZEUS token utility before ZEUS gains high exchange volume and can start to be used as the main currency in the crowdfunds.

The ZeusNetwork team decided that in order to donate to the campaigns, the user must have a certain amount of ZEUS in their wallet, without it the donator cannot donate.

This contract has already been deployed to the Ropsten Testnet if you would like to test it out. Just ask the team to transfer you test ZeusNetwork tokens from this contract in order to donate test ETH to one of the test campaigns so you can see how the ZeusNetwork contracts will work.

Test Instructions

1. Go to <https://faucet.ropsten.be/> and enter your Ropsten ERC-20 address to be sent test Ether.
Note: This is different than your ERC-20 address where you hold your real Zeus Network tokens
2. Ask the ZeusNetwork team to transfer you test ZeusNetwork tokens to your Ropsten ERC-20 address.
3. Go to <https://zeusfundme.com/index.php/discover/> and click Donate Now on one of the campaigns listed
4. Send the test Ether to the address displayed. Note the text under the Campaign name stating that you must have 10,000 ZEUS in your ETH wallet that you will use to donate, in order for the donation to go through.

TokenCrowdfund

TokenCrowdfund is a base contract for managing token donations, allowing donors to donate tokens to a campaign. This crowdfund smart contract can be used to collect various tokens such as BNB, Pundi, CONI and other well-known tokens with high volume.

When used with...	The crowdfund will...
Other tokens besides ZeusNetwork in the campaign	Have the HolderCrowdfund feature
ZeusNetwork as the main funding token in the campaign	Not have the HolderCrowdfund feature enabled

Campaign Vetting Process

- Personal data** The user enters their personal information so we can do the verification for the crowdfund campaign.
- Validation** In this stage we will need three photos. The first photo of your Government Issued ID; The second a Photo of you holding the ID; The third photo of yourself holding your ID and a piece of paper with the word ZEUSFUNDME written on it.
- Campaign Information** In this last step, the user provides all the data related to your campaign. We will contact you if we have any further questions.

Strategic World-Wide Marketing Campaign

Overview

The ZeusNetwork marketing campaign will have three major components which will acquire local and international awareness to the project. These simple marketing strategies will help with awareness and adoption to our platform.

Marketing Components

1. Involvement of every-day users to participate within our network, using our platform to create their individual funding campaigns. This will enhance cryptocurrency awareness outside of blockchain community to get involved and use our platform as a secure pathway to raise funds for different circumstances worldwide.
2. Partnerships with local and international charity organizations is our main goal within our roadmap to help build trust towards our network. This will increase usability of our platform for everyday users around the world. Our target is to obtain organizations to integrate and accept this new revolutionary technology within the fundraising sector. ZeusNetwork will create alliances with other cryptocurrency projects that share the same passion within the crypto space to enhance a strong foundation and help advance the blockchain technology.
3. Media marketing is one of our main strategies for ZeusNetwork. Our aim is to participate in many forms of advertising including local and online write ups within respective companies. Network by participating in sponsored avenues that ties within our industry for exposure.
